

ENTEROSGEL

WHAT IS IT?

- ENTEROSGEL® is the original food additive product as based on organic silicon and designed to remove toxic substances from the organism.
- It positively influences the course of various diseases. It is of beneficial use in a number of diseases as related to the following medical fields :
 - Allergology
 - Dermatology
 - Gastroenterology
 - Gynaecology
 - Hepatology
 - Surgery
 - Oncology
 - Psychiatry
 - Dentistry
 - Urology

It is suitable for detoxification of human organism at the anti-obesity and anti-drug addiction cures (the drug addiction treatment). Enterosgel is known to protect human organism from adverse effects of alcohol. There are over 200 specialist medical studies emphasizing the effects of Enterosgel.

It is a soft gel without any taste or smell, which can be swallowed directly or easily mixed in a beverage for drinking.

ENTEROSGEL® is a gel of methyl silicic acid known to form a porous molecular structure (similar to the fungus), which is able to bind and remove mainly medium molecular toxic substances.

It is known to action in the digestive tract, where it binds such medium-sized molecular substances as the toxic compounds, degradation products, cholesterol, toxic products (that damage the stomach and intestinal tract's lining), allergens, pathogenic bacteria and viruses. ENTEROSGEL® restores the natural intestinal microflora status. ENTEROSGEL doesn't bind any trace elements or any other useful substances. It does not undergo absorption being eliminated from the organism altogether with bound toxic substances without any adverse effects.

ENTEROSGEL

WHEN DOES ENTEROSGEL HELP?

Weight loss and Enterosgel

During the weight loss-related cures, human organism releases increased amounts of toxic substances and waste products of metabolism. This can lead to nausea and other unpleasant conditions that may even jeopardize the process of weight loss as such.

Therefore, when undergoing the weight loss cure, it is very convenient to use ENTEROSGEL® detoxication food supplement, which helps actively to remove the undesirable substances from the organism.

Antibiotics and Enterosgel

Antibiotics destroy pathogenic bacteria and normal microflora of the intestinal tract. When the bacteria die, they release endotoxins into the intestinal tract. If endotoxins are absorbed into the blood, they exert then a noxious effect on the whole organism in complicating and prolonging its healing process. Therefore, every 2-3 hours after taking your antibiotics, you are recommended to take 2 to 3 doses (one dose is one coffee spoon with a scoop) of Enterosgel, which, like a sponge, will absorb endotoxins and prevent them from being absorbed into the blood. By this action, the organism becomes less loaded and its healing occurs faster.

Gastritis, gastroduodenitis and Enterosgel

Enterosgel is helpful from ulcerous intestinal disorders, because it creates adverse conditions for the growth of *Helicobacter pylori* bacteria known to contribute significantly to the onset of ulcerous disease. By binding and removing toxins, Enterosgel creates favourable conditions for healing of stomach- or duodenum mucosal disorders. Enterosgel must be taken 3 times daily 30 minutes before a meal (at least 1 hour before or after taking drugs).

Gynecology and ENTEROSGEL®

Enterosgel is recommended as a supplement in the treatment of acute and chronic yeast, fungal, bacterial and viral vaginal infections.

ENTEROSGEL

WHEN DOES ENTEROSGEL HELP?

Pregnancy and ENTEROSGEL®

Enterosgel removes toxic substances from the body through the intestinal tract and thereby reduces the loading on the liver and kidney. Enterosgel does not take out, any vitamins, digestive enzymes, amino acids and immunoglobulins from the mother's body. Consequently, the use of Enterosgel does not expose the mother and/or foetus to a risk of any above-mentioned stealing. Therefore, Enterosgel is suitable for using in the normal and complicated pregnancies.

Alcohol and ENTEROSGEL®

In the gastro-intestinal tract, Enterosgel tightly binds alcohol supporting its elimination from the body. Enterosgel is useful in all cases where it is necessary to get rid of the harmful influence of alcohol.

Diabetes and ENTEROSGEL®

In the Type 2 diabetes, it is recommended to use Enterosgel 3 times a day.

Helminthoses and ENTEROSGEL®

As a result of current treatment of helminthoses (worms, roundworms, tapeworms), toxic substances are released into the digestive tract from the bodies of destroyed parasites. Enterosgel binds these toxic substances in the digestive tract and eliminates them from the organism so as to decrease its loading by the current treatment.

IS ENTEROSGEL SAFE ENOUGH?

ENTEROSGEL® is safe – it is not adsorbed from the gastrointestinal tract being completely eliminated from the organism within 12 hours.

ENTEROSGEL

HOW DO I DOSE IT?

Adults and children over 15: 15–22,5 g three times per day (15 g = 1 tablespoon)

Children aged 7–14: 10 g three times per day (10 g = 2 teaspoons)

Children aged 1–6: 5 g three times per day (5 g = 1 teaspoon)

Wash down with a sufficient amount of fluid (200 ml for adults and children 7 and over, 50–100 ml for children aged 1–6).

A sufficient intake of fluids is also necessary as part of basic treatment of acute diarrhea. Use 1–2 hours before or after meals or taking medication.

Even though the instructions indicate 3x/day, you may start off with only once or twice a day.

Enterosgel® may affect the absorption of some medicines that are administered orally – use Enterosgel® 1–2 hours before or after taking medication.

WHERE DO I GET IT FROM?

Australian Customers

You can purchase ENTEROSGEL from Vital.ly. If you don't have an account, let me know and I'll create one for you. If you have an existing account but need access to the product, let me know, or request it through Vital.ly.

US Customers

You can purchase the gel or sachets via AMAZON.com
